

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

## Experiment 6

**Student Name:** Manpreet Singh

**Branch:** CSE

**Semester:** 6

**Subject Name:** Java with Lab

**UID:**22BCS50009

**Section/Group:**901/A

**Date of Performance:**

**Subject Code:** 22CSH-359

**1. Aim:** Develop Java programs using lambda expressions and stream operations for sorting, filtering, and processing large datasets efficiently.

### **2. Objective:**

- Develop Java programs using lambda expressions and stream operations for sorting, filtering, and processing large datasets efficiently.
- Implement easy, medium, and hard-level tasks involving sorting employees, filtering and sorting students, and processing products using streams.

### **3. Implementation/Code:**

```
a. import java.util.*;

class Employee {
    String name;    int age;
    double salary;

    Employee(String name, int age, double salary) {
        this.name = name;    this.age = age;
        this.salary = salary;
    }

    @Override    public String toString() {        return name
        + " - Age: " + age + ", Salary: " + salary;
    } }

public class EmployeeSort {    public static void
main(String[] args) {        List<Employee> employees
= Arrays.asList(            new
Employee("Ayush", 20, 90000),        new
Employee("Vinay", 22, 100000),
```

## DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
        new Employee("Prakul", 23, 70000)
    );
    employees.sort(Comparator.comparing(emp -> emp.name));
    System.out.println("Sorted by Name: " + employees);
    employees.sort(Comparator.comparingInt(emp -> emp.age));    System.out.println("Sorted
    by Age: " + employees);    employees.sort(Comparator.comparingDouble(emp ->
    emp.salary));
    System.out.println("Sorted by Salary: " + employees);
    }
}
```

```
b. import java.util.*; import
java.util.stream.Collectors; class Student {    private
String name;    private double marks;    public
Student(String name, double marks) {
this.name = name;    this.marks = marks;
    }
    public String getName() {
return name;
    }
    public double getMarks() {
return marks;
    } }
public class StudentFilter {    public
static void main(String[] args) {
List<Student> students = List.of(        new
Student("Ayush", 85),        new
Student("Rajeev", 70),        new
Student("Vinay", 90),        new
Student("David", 60),        new Student("Prakul",
80)
```

## DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
);

List<String> topStudents = students.stream()
    .filter(s -> s.getMarks() > 75)
    .sorted(Comparator.comparingDouble(Student::getMarks).reversed())
    .map(Student::getName)
    .collect(Collectors.toList());

System.out.println("Top Students: " + topStudents);
}
}
```

```
c. import java.util.*; import java.util.stream.Collectors; class
Product {    String name;    String category;    double price;
public Product(String name, String category, double price) {
this.name = name;        this.category = category;
this.price = price;
}
@Override    public String toString()
{        return name + " ($"
+ price + ")";
} } public class ProductProcessor {    public
static void
main(String[] args) {        List<Product> products =
Arrays.asList(            new Product("Laptop",
"Electronics", 1200),            new Product("Phone",
"Electronics", 800),            new Product("TV",
"Electronics", 1500),            new Product("Shirt",
"Clothing", 50),            new Product("Jeans",
"Clothing", 70),            new Product("Blender",
"Appliances", 200),            new Product("Toaster",
"Appliances", 100)
);
```

## DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Map<String, List<Product>> productsByCategory = products.stream()
.collect(Collectors.groupingBy(p -> p.category));    System.out.println("Products grouped by
category:");    productsByCategory.forEach((category, productList) ->
    System.out.println(category + ": " + productList));
Map<String, Optional<Product>> mostExpensiveByCategory = products.stream()
    .collect(Collectors.groupingBy(
        p
-> p.category,
        Collectors.maxBy(Comparator.comparingDouble(p -> p.price))
    ));
System.out.println("\nMost expensive product in each category:");
mostExpensiveByCategory.forEach((category, product) ->
    System.out.println(category + ": " + product.orElse(null)));    double averagePrice
= products.stream()
    .mapToDouble(p -> p.price)
    .average()
    .orElse(0);
System.out.println("\nAverage price of all products: $" + averagePrice);
}
}
```

#### 4. Output:

```
input
Sorted by Name: [Ayush - Age: 20, Salary: 90000.0, Prakul - Age: 23, Salary: 70000.0, Vinay - Age: 22, Salary: 100000.0]
Sorted by Age: [Ayush - Age: 20, Salary: 90000.0, Vinay - Age: 22, Salary: 100000.0, Prakul - Age: 23, Salary: 70000.0]
Sorted by Salary: [Prakul - Age: 23, Salary: 70000.0, Ayush - Age: 20, Salary: 90000.0, Vinay - Age: 22, Salary: 100000.0]
```

## DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

```
Top Students: [Vinay, Ayush, Prakul]
```

```
Products grouped by category:  
Appliances: [Blender (200.0), Toaster (100.0)]  
Clothing: [Shirt (50.0), Jeans (70.0)]  
Electronics: [Laptop (1200.0), Phone (800.0), TV (1500.0)]  
  
Most expensive product in each category:  
Appliances: Blender (200.0)  
Clothing: Jeans (70.0)  
Electronics: TV (1500.0)  
  
Average price of all products: $560.0
```

### 5. Learning Outcome:

- Understand and implement **lambda expressions** for sorting objects in a list based on different attributes.
- Utilize **Java Streams API** to perform operations like **filtering, sorting, and mapping** efficiently on large datasets.
- Learn **Comparator and method references** to simplify object comparisons for sorting.
- Apply **grouping and aggregation functions** using `Collectors.groupingBy()` and `Collectors.maxBy()` for processing categorized data.
- Gain hands-on experience in computing **statistical values** like the **average** from a dataset using `mapToDouble()` and `average()`.
- Improve **code efficiency and readability** by using **functional programming** techniques in Java.
